

STREAMLINE YOUR QC PROCESS AND IMPROVE OPERATIONAL & COST EFFICIENCIES

What is QC Inside®?

SEKISUI Diagnostics offers QC Inside® for most OSOM® kits, which means a kit of 25 tests includes 25 tests for patient samples and 2 additional tests that can be used for quality control.

At no additional charge, each kit contains:

- ✓ extra test strips
- ✓ extra extraction buffers
- ✓ and other components

...allowing for an additional 2 tests per kit.

Why we developed QC Inside®:

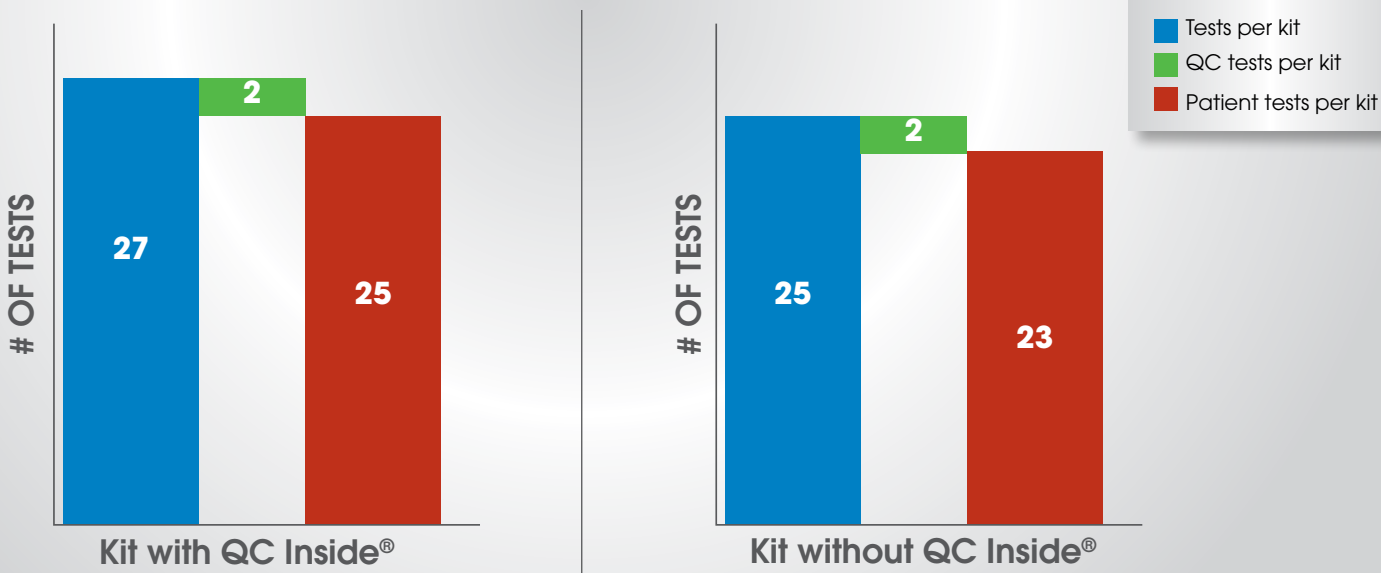

For all CLIA-waived tests, it is recommended to test one positive and one negative control every time there is a:

- ✓ new product shipment.
- ✓ change in lot number.
- ✓ new untrained user.

- 25 Tests per Kit**
The number of tests that come per kit for rapid antigen tests.
- 2 Quality Control Tests**
The number of tests per kit consumed for quality control purposes.
- 23 Patient Tests per Kit**
The number of tests per kit that are for patient testing.

Patient tests per kit with QC Inside® vs. patient tests per kit without QC Inside®

Let's assume the following...

Your patient testing demand for a specific test is...

100 patient tests per month

This requires you to order...

4 kits of 25 tests

Kits with QC Inside®

Kits without QC Inside®

Quality control is necessary for the new shipment so you will yield...

Quality control is necessary for the new shipment so you will yield...

106 patient tests

98 patient tests

6 additional patient tests per month

Not enough patient tests per month
